

Daniel Mateu Pardo

Full Stack Web Developer

Profile

I am a passionate Full Stack developer with three years of experience. I combine the creativity of the Frontend with the robustness of the Backend to create innovative solutions.

Employment History

Office Coordinator at Niza Cars, El Prat de Llobregat

March 2019 — March 2023

As a coordinator, I led a team of 10 individuals, managing schedules, training, and day-to-day operations. I worked closely with other departments, ensuring vehicle availability and optimizing processes. My attention to detail and ability to remain calm under pressure contributed to operational success and customer satisfaction.

Team Lead at Sellbytel/Webhelp, Barcelona

January 2018 — January 2019

I led a team of 8. Our mission was to effectively address issues related to products in the Play Store and Pixel smartphones. I oversaw the resolution of both hardware and software incidents, ensuring quality customer care with effective solutions. My role involved task planning, team training, and close collaboration with the company to ensure a positive customer experience.

Internships

Full-Stack Developer at Discord Clone, Barcelona

September 2023 — September 2023

It's a real-time chat and voice application built with NextJS, TypeScript, Tailwind, Socket.io, which allows us to add support for real-time communication to an application, and LiveKit, which creates live audio and video applications and features.

It was quite a challenge to integrate Socket.io with NextJS due to the latest updates, but we successfully completed it with very good results.

Full-Stack Developer at Dudes AI, Barcelona

July 2023 — August 2023

An application that leverages AI resources to engage in conversations with bots created by ourselves. It's built with Next 13, TypeScript 5, Tailwind 3, OpenAI 4, Zustand 4, Prisma 5, and Stripe.

Docker

Full-Stack Developer at Nuko AI, Barcelona

June 2023 – July 2023

A web application that connects to the OpenAI API to generate text, code, images, and even music. This app was created using Next 13, TypeScript 5, Tailwind 3, OpenAI 4, and Stripe 13 for managing potential subscriptions.

Education

CIFO Violeta at Barcelona

Backend Bootcamp

April 2023 – July 2023

I specialized in technologies like PHP and Laravel during this bootcamp. Throughout this program, I gained experience in developing robust and scalable server-side applications.

Udemy at Online

NextJS Master

December 2022 – April 2023

Through this course, I acquired in-depth knowledge of Next.js 12 and its ability to provide server-side rendering (SSR) and hybrid static rendering.

Udemy at Online

Master in MERN Stack and Unit Testing

June 2022 – July 2022

An essential aspect of the course was the integration of unit testing with Jest, which allowed me to ensure the quality and stability of applications at every stage of development.

During this course, I delved deeply into key topics such as hooks, custom hooks, Redux, and explored backend development with Node.js, MongoDB, Docker, and Firestore, which constitute the popular MERN Stack.

IT Academy at Barcelona

Desarrollo Front End

September 2021 – April 2022

I attended a specialized Angular bootcamp where I acquired a solid set of frontend development skills. I learned essential technologies such as HTML, CSS, JavaScript, TypeScript, Bootstrap, and MySQL.
